

Workshop:

New Applications of BIS Monitoring Technology for ICU Management of Post-Cardiac Arrest Patients

- Early prediction of neurological outcome following out-of-hospital cardiac arrest with BIS monitoring
- Influence of electromyographic activity on BIS indices: Can we predict neurologic outcome with BIS monitoring without the continuous need for neuromuscular blockers?
- Early detection of non-convulsive seizures and other ominous EEG patterns following out-of-hospital cardiac arrest

Speakers: Dr. Cathy De Deyne & Dr. Ward Eertmans

Location: Brussels Plaza Hotel – Paola Room

Wednesday November 7, 2018 @ 12h45 – 13h45
